On site experiences of eco tourists have positive impact on the willingness of tourists to pay for the conservation of wildlife.

However that willingness to pay is sensitive to whether or not wildlife is not only seen but intimately experienced. (NOT A PETTING ZOO)

The Nature Conservation Institute combination with Africa Retile Conservation and Africa Scorpion Research..... Combine knowledge, education and research to provide an environment for full participation

EXPERIENCING NATURE IS MORE THAN JUST A GAME DRIVE

A common justification for developing positive wildlife and nature experiences and attractions is that it helps in securing long term conservation objectives

Managers and guides will often highlight their roles in protecting wildlife and its habitat, but little is offered to connect the interests, needs, and preferences of tourists.

Our objective is to enlist tourists as conservation partners through participation and interaction in research, meeting the needs of both tourist and conservation

EXPERIENCING NATURE IS MORE THAN JUST A GAME DRIVE

SPECIFIC SPECIES CONSERVATION & RESEARCH

Personally, experiencing nature and wildlife through participating in research programs are tools that can be **valuable lectures, increasing conservation consciousness / Scorpions / Reptiles / Specific species / Specific habitats.**

The Nature Conservation Institute team / ARC / ASR /is highly qualified in all disciplines of conservation and wildlife management.

Weekend programs / 7-day programs / 14-day programs / 30 days or longer

PHOTO SAFARIS ASSISTING IN RESEARCH

Up close and personal while participating in education and research

Not only for expert photographers but beginners as well. Our team will assist you in advice and even equipment rental

NCI MEDIA

Participating in research by creating short films. A unique program by The nature conservation institute and ARC.

Our team of professional photographers create short films and content assisting you in fundraising projects and sponser programs. Filming is done in an ethical way in the highest quality assisted by experts in animal behaviour

FEEL THE RUSH OF ADRENALINE

Personally experiencing nature and wildlife through participating in research programs are tools that can be lectures.
